NEW FRUITS FOR 1951

Here, we are offering these new fruits which seem destined for a bright future. From our observation to date, I believe each of these will have a definite place in fruit growing. However, trials have been limited so they are offered particularly to those of you who derive a special pleasure in the trial and testing of new things. The supply of each of these is very limited—so order at once.

SEPTEMBER - FALL BEARING RED RED RASPBERRY

Another brand new two crop red raspberry originating from the New York Experiment Station. This looks like a winner to us, especially for its fine summer crop. Berries are of excellent size, a little larger than Latham. Beautiful bright red and firm. Quality is good. Plants are vigorous, hardy, healthy and productive here. We like it for freezing too. Our yield here was at the rate of over three-quarters ton per acre from a planting just one year old—the first crop. First picking was July 8 and then on to August 12. The fall crop is about the same as Indian Summer only somewhat earlier. The fall crop is not too dependable here. Supply very limited.

PREPAID PRICES. Each 70c, 3 for \$1.75, 6 for \$3.25, 12 for \$6.00.

DURHAM

Fall Bearing
Red Raspberry

Now we have a new everbearing red raspberry that really ripens its fruit early enough in the fall to produce a worthwhile crop. Here, our first fall picking comes in early September and the crop lasts until hard freezing weather. Canes about three feet tall, vigorous, hardy, healthy and productive. Fall quality is good. Originated at the new Hampshire Experiment Station and is being offered for the first time this year. Supply very limited.

PREPAID PRICES

Each 65c, 3 for \$1.80, 6 for \$3.30,
12 for \$6.00

RICH RED STRAWBERRY

EVERBEARING

(Plant Patent 993)

This fine new everbearing strawberry from Minnesota is really taking the strawberry world by storm and is the most promising everbearer since 1918. Large, firm, deep red all through. Sweet and of high quality. Produces a heavy fall crop followed by high yields in the next June. Excellent for freezing. Very hardy, healthy, vigorous and a good plant maker. A fine companion to June Rockhill. Order today, the supply is very limited.

PREPAID PRICES

25 for \$5.00 50 for \$8.50 100 for \$15.00

All of our Strawberry and Raspberry plants are state inspected two or more times each season. Our plants are guaranteed free from Red Stele, Mosaic and all other dangerous insects and diseases.

OTHER RASPBERRIES - Ask For Large Quantity Prices

Heavily Rooted No. 1 Plants	12	25	100
Bristol. Black	\$2.10	\$3.75	\$12.50

This grand new blackcap is the finest we have ever grown. Large, firm, glossy jet black, deliciously sweet. Good vigorous growers and excellent producers. It succeeds over a wide territory—wherever black raspberries are grown.

Cumberland. Black	1.75	2.90	9.35
--------------------------	-------------	-------------	-------------

This old variety has been the favorite blackcap for a long time.

Indian Summer. Red	2.15	4.10	13.95
---------------------------	-------------	-------------	--------------

Here is a fall bearer that has been gaining new friends every year since it was introduced. The very large berries of fine dark red color, have good quality. Produces a heavy summer crop. Here, the fall crop ripens too late to have much value. Strong vigorous grower. A choice home and local market berry.

Latham. Red	1.75	3.25	11.55
--------------------	-------------	-------------	--------------

Most widely grown of all red raspberries in America. Heavy producer of large delicious berries of bright red color during July. No mosaic has ever been found in our plantings.

	12	25	100
Morrison. Black	1.95	3.65	12.65

Ripens a little later than Cumberland. Large, glossy black, very attractive berries. Firm, sweet and juicy. Delectable flavor. Excellent for every way black raspberries are used. Sturdy, vigorous grower and a heavy producer. Choice for home or market.

Potomac. Purple	2.45	4.35	16.15
------------------------	-------------	-------------	--------------

Very heavy producer, ripening quite early and over a long period. Not as large as Sodus, but a little higher in quality. Vigorous and hardy. Supreme for jelly and freezing. Supply very limited.

Sodus. Purple	2.15	4.10	14.85
----------------------	-------------	-------------	--------------

What a surprise is in store for you if you have never seen or tasted this wonderful berry. A very heavy producer of mammoth, firm berries, sprightly and good in quality. Superb for jelly and freezing. Very vigorous and productive. Hardy. Ripens just after Latham. Plant 3 feet apart in the rows and have the rows 7 or 8 feet apart. Resistant to drought and yields a good crop every year. Highly resistant to disease. You just cannot go wrong with Sodus.

The Strawberry of Tomorrow!

New!

June Rockhill

(Plant Patent 854)

Never before has there been a variety of strawberry with so many desirable qualities as the JUNE ROCKHILL. The **superb high quality** of this berry is unequaled and mere words are usually found to be inadequate to express the surprise and satisfaction, when folks first taste this delicious berry. Its **exceptional sweetness**, and flavor suggestive of the wild strawberry, delights everyone.

Deep shiny red berries, with the color carried all through, characterize this berry. The berry ripens all over at the same time with **no white tips** to mar its beauty. It has **no core**. This is not true of many other varieties.

JUNE ROCKHILL is very easy to pick and the caps adhere to the berries.

Tests have proven this berry to be very choice for quick freezing and lockers, as the flavor, color and its enticing aroma are retained when frozen.

This is a June fruiting berry and begins to ripen several days before Dunlap and continues through the season of Dunlap.

AN IDEAL BERRY FOR HOME GARDEN AND LOCAL MARKET PLANTING

The U. S. Department of Agriculture says, "Berry large, irregular round conic to short wedge, medium firm, bright rich red, quality EXCELLENT, foliage dark green, very healthy."

PREPAID PRICES

\$2.25 for 25; \$3.75 for 50; \$11.90 for 250; \$18.75 for 500 \$30.00 for 1000.

\$5.95 per 100 prepaid

**for the Ultimate
in taste thrills.**

June Rockhill plants are **exceptionally hardy** and can be grown clear to the north limits of strawberry culture. A vigorous grower, it makes runners freely. The distinct, heavy textured foliage is **very resistant to leaf spot**.

Blossoms are perfect and seem to possess a greater frost resistance than many varieties.

Heavy erect fruit stems hold the fruit off the ground. This prevents heavy losses in rainy periods, makes picking easier and provides cleaner berries.

Protected by Plant Patent 854. Under the U. S. Patent laws, the June Rockhill strawberry cannot be propagated for sale or gift of plants to others except by permission and under license of the patent holder.

WHEELOCK WILSON NURSERY

NEW HARDY-CLARK DWARF APPLE TREES!

DEVELOPED BY IOWA STATE COLLEGE, AMES, IOWA

Grown By - THE WHEELLOCK WILSON NURSERY

YOU too can grow apples. No matter if your space is limited, you can find room for one or several of these new **HARDY CLARK DWARF** apple trees. Hardy and easy to grow, they require no more space than a large shrub.

The only reliable hardy, true dwarf type apple trees, that can be grown in the Great Plains area, are those grown on the true **CLARK DWARFING** stock.

Our method of growing these trees follows the recommendations of the late Prof. T. J. Maney of Iowa State College at Ames, Iowa. It was his idea to graft a section of the Clark dwarfing stock on the stem of a hardy vigorous variety, such as Virginia Crab, then to graft the desired variety, such as Jonathan or Delicious, on the Clark stock, thus dwarfing the variety on top.

This method insures a strong, hardy, vigorous root system and, through the influence of the Clark stock, the variety grafted on it is dwarfed.

Varieties grown on the true Clark dwarf stock come into bearing when quite young, usually setting some fruit buds when growing in the nursery row.

The fruit is normal to above normal in size on the dwarf trees and the shape, color and flavor remain the same for the variety.

From observation, I will suggest that these trees be planted ten feet apart. They will vary somewhat in the extent to which they are dwarfed, from very dwarf, to semi-dwarf and, in some cases, to probably three-quarters dwarf, depending on the influence of the soil, method of pruning the variety, and the variety itself.

Also, from observation, I recommend that the Clark dwarf apple trees be pruned quite heavily each year. Pruning should be largely confined to heading back most of the terminal twig growth early in the spring, and the removal of all crossing and interfering branches.

Each \$3.50 **3 for \$10.00**
10 for \$30.00

Due to the extra skilled labor required, and high costs involved in producing, growing and packing, only varieties of superior quality and special merit appear in our list of varieties grown on the Clark Dwarf stock.

AUTUMN STRAWBERRY—An older variety, choice for eating and cooking. Season—September and October. A favorite with those who know it.

BEACON—A new, very attractive, red summer apple from Minnesota. Same season as Duchess but far superior. Very hardy.

CORTLAND—Apples large and well colored with blush and stripes. Crisp white flesh. Desirable for dessert, salads and cooking. Excellent keeper. Very hardy.

DELICIOUS—solid red sport of this great apple.

YELLOW DELICIOUS—Choice, long keeping dessert and cooking apple.

GRIMES GOLDEN—This fine old variety ranks high in popularity with all who know it.

JONATHAN—A beautiful, deep red sport of this grand variety. Our most popular apple. (NOTE: Our trees are admirably adapted for growing as espaliers).

McINTOSH—An old favorite fall and winter variety. Hardy.

RIBSTON—A grand old English fall variety with a fine rich flavor. Flesh yellow, crisp and juicy. It is unsurpassed for beautiful sauce.

SECOR—A large, late-keeping, Jonathan type apple. Developed at Iowa State College. Superior in quality and flavor.

SHARON—A beautiful late fall and early winter variety having special merit for dessert, sauce and baking. Its mild rich flavor and very high quality appeals to everyone. Another Iowa State College origination.

TURLEY—Large, highly colored winter apple surpassing the old Winesap in all respects. An excellent variety and dependable cropper.

WEALTHY—Long the most popular fall apple.

NOTE—In addition to the varieties listed, the following will be available in the fall of 1951 and spring of 1952: **CHENANGO**, **FIRESIDE**, **MANTET**, **MELBA**, **MINJON**, **MINN No. 978** (Lakeland), **ORIOLE**, **PRAIRIE SPY**, and **VICTORY**.

HOPA FLOWERING CRAB

These are being grown for those of you who have but a limited space and wish to enjoy this very beautiful ornamental.

Prices—same as for other dwarf apples.

SPECIAL CLARK DWARF GRAFTS

CALLoused — READY TO GROW

Planted this spring, these will be ready to bud to your favorite variety in August, or to graft early next spring.

PREPAID PRICES

Each \$1.00

3 for \$2.75 - 10 for \$8.50

Limit 10 to each customer.

As a commercial fruit grower, I know the type and grade of fruit trees and plants which produce the strong, long lived trees that become the most profitable in the orchard. Our trees and plants are very well grown, properly graded and packed to reach you in prime growing condition **BUY FROM US WITH CONFIDENCE.** No better trees are offered at any price.

INTERMEDIATE STOCK FOR TOP-WORKING

These are strictly first grade, grafted trees. No better trees are grown anywhere. Plant five to six inches deeper than they stood in the nursery to promote rooting on the scion stock. The many trees we have furnished to satisfied commercial orchardists attests to the quality of our trees.

Piece-root grafted on hardy rootstock	Each	10-50	50 or more
HIBERNAL and VIRGINIA CRAB
